DATE MAILED: 09/15/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No.

10/769,496

Applicant(s)

ALI, AHMAD A. J.

Examiner

Paul Contino

Art Unit

2114

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 January 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-36 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-36 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 30 January 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION: Non-Final Rejection

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Claim 28 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 28 recites the limitation "the file" in line 13. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 10, 12-14, and 18 are rejected under 35 U.S.C. 102(b) as being anticipated by Williams et al. (U.S. PGPub 2001/0042230 A1).

As in claim 10, Williams et al. discloses a method for media repair of a storage device, comprising:

performing a read operation on the storage device (*paragraphs [0013], [0014], and [0056]*);

detecting a signature (*paragraphs [0013], [0014], and [0056], where an ECC is interpreted as a signature*); and

performing a write operation on the storage device (*paragraphs [0013], [0014], and [0056]*).

As in claim 12, Williams et al. discloses the read operation is a READ LONG operation (*paragraphs [0013], [0014], and [0056]*).

As in claim 13, Williams et al. discloses the write operation is a WRITE LONG operation (*paragraphs [0013], [0014], and [0056]*).

As in claim 14, Williams et al. discloses the WRITE LONG operation produces invalid ECC data (*paragraph [0008]*).

As in claim 18, Williams et al. discloses the storage device is a non-RAID configuration (*entirety of Specification*).

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1, 2, 6-9, 19, 20, and 24-27 are rejected under 35 U.S.C. 102(e) as being anticipated by George (U.S. Patent No. 6,993,679 B2).

As in claim 1, George discloses a method for media repair of a storage device, comprising:

performing a read operation on the storage device (*column 7 lines 24-54*);

detecting a read error (*column 7 line 17*);

locking a logical block address on the storage device (*column 4 lines 21-26 and column 10 lines 34-41, where inhibiting a read to an address is interpreted as locking the logical block address*);

performing a reassign operation on the storage device (*column 4 lines 46-48 and 55-58*);

performing a write operation on the storage device (*column 5 line 23*); and

unlocking the logical block address (*column 4 lines 21-26 and column 10 lines 34-41, where allowing a read to an address is interpreted as unlocking the logical block address*).

As in claims 2, 6, 7, 8, and 9, George discloses the storage device is a non-redundant RAID configuration/SCSI device/IDE device/ATA device/non-RAID configuration (*column 6 lines 3-19*).

As in claim 19, George discloses a method for media repair of a storage device, comprising:

performing a read operation on the storage device (*column 7 lines 24-54*);

locking a logical block address on the storage device (*column 4 lines 21-26 and column 10 lines 34-41, where inhibiting a read to an address is interpreted as locking the logical block address*);

performing a write operation on the storage device (*column 5 line 23*); and

unlocking the logical block address (*column 4 lines 21-26 and column 10 lines 34-41, where allowing a read to an address is interpreted as unlocking the logical block address*).

As in claims 20, 24, 25, 26, and 27, George discloses the storage device is a non-redundant RAID configuration/SCSI device/IDE device/ATA device/non-RAID configuration (*column 6 lines 3-19*).

* * *

4. Claims 10, 11, and 13-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Humlicek et al. (U.S. Patent No. 6,944,791 B2).

As in claim 10, Humlicek et al. discloses a method for media repair of a storage device, comprising:

performing a read operation on the storage device (*column 5 line 40 through column 6 line 11*);

detecting a signature (*column 5 line 40 through column 6 line 11, where an ECC is interpreted as a signature*); and

performing a write operation on the storage device (*column 5 line 40 through column 6 line 11*).

As in claim 11, Humlicek et al. discloses the storage device is a non-redundant RAID configuration (*entirety of Specification*).

As in claim 13, Humlicek et al. discloses the write operation is a WRITE LONG operation (*column 5 line 40 through column 6 line 11*).

As in claim 14, Humlicek et al. discloses the WRITE LONG operation produces invalid ECC data (*column 5 line 40 through column 6 line 11*).

As in claim 15, Humlicek et al. discloses the storage device is a SCSI device (*column 6 lines 9-11*).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 3-5, 21-23, and 28-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over George in view of Williams et al.

As in claims 3-5 and 21-23, George teaches of read and write operations. However, George fails to teach of a read long, a write long, and producing invalid ECC data via a write long. Williams et al. teaches of a read long, a write long, and producing invalid ECC data via a write long (*paragraphs [0008], [0013], [0014], and [0056]*).

It would have been obvious to a person skilled in the art at the time the invention was made to have included the operations as taught by Williams et al. in the invention of George. This would have been obvious because it is well-known in the art to use read/write long operations and corrupt ECC data in order to validate a storage device (*Williams et al.: paragraphs [0008] and [0009]*).

As in claim 28, George teaches a computer system comprising:

a storage device having storage media, the storage device constructed and arranged to perform a read operation (*column 7 lines 24-54*);

the storage device further constructed and arranged to detect a read error (*column 7 line 17*);

the storage device further constructed and arranged to lock a logical block address on the storage device (*column 4 lines 21-26 and column 10 lines 34-41, where inhibiting a read to an address is interpreted as locking the logical block address*);

the storage device further constructed and arranged to perform a reassign operation on the storage device (*column 4 lines 46-48 and 55-58*);

the storage device further constructed and arranged to perform a write operation on the storage device (*column 5 line 23*); and

the storage device further constructed and arranged to unlock the logical block address (*column 4 lines 21-26 and column 10 lines 34-41, where allowing a read to an address is interpreted as unlocking the logical block address*); and

the storage device can detect errors in the storage media during the read operation (*column 7 lines 24-54*).

However, George fails to teach of writing invalid ECC data. Williams et al. teaches the storage device can write invalid ECC data to prompt replacement of [a] file being read (*paragraph [0008]*).

It would have been obvious to a person skilled in the art at the time the invention was made to have included the ECC as taught by Williams et al. in the invention of George. This would have been obvious because it is well-known in the art to use read/write long operations

Art Unit: 2114

and corrupt ECC data in order to validate a storage device (*Williams et al.*: paragraphs [0008] and [0009]).

As in claims 29, 33, 34, 35, and 36, George discloses the storage device is a non-redundant RAID configuration/SCSI device/IDE device/ATA device/non-RAID configuration (*column 6 lines 3-19*).

As in claims 30, 31, and 32, Williams et al. teaches of a read long, a write long, and producing invalid ECC data via a write long (*paragraphs [0008], [0013], [0014], and [0056]*).

* * *

6. Claims 16 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Williams et al. in view of George.

As in claims 16 and 17, Williams et al. teaches of a storage device. However, Williams et al. fails to teach of an ATA or IDE storage device. George teaches of an ATA and IDE storage device (*column 6 lines 3-5*).

It would have been obvious to a person skilled in the art at the time the invention was made to have included the storage device types as taught by George in the invention of Williams et al. This would have been obvious because the invention of George teaches of determining an error in a SCSI-compatible storage device similar to that as taught by Williams et al. while

reassigning and mapping defective disk areas in order to increase the integrity of stored data
(column 2 lines 1-23).

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul Contino whose telephone number is (571) 272-3657. The examiner can normally be reached on Monday-Friday 9:00 am - 6:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Scott Baderman can be reached on (571) 272-3644. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

A handwritten signature in black ink, appearing to be 'SB', with a long horizontal flourish extending to the right.
